

New generation of weed burners

Based on our many years experience with the construction and manufacturing of weed burners, we have developed a new generation of machines with focus on high energy efficient and low CO₂ emission.

Advantages:

- Low noise
- Energy efficient – average reduction of gas consumption up to **40%**
- Low CO₂ emission
- Independent of windy weather

In other words our new generation of weed burner meets the demands of tomorrow according to the working and surrounding environment.

Specifications:

- Working speed: 6 km/h, depending on weather and type of weed.
- Propane consumption: 36 - 48 kg/ha (15-20 kg/acres), depending on working speed.
- Working width: Adapt to customer requirements
